Riverside Community Hospital - Discharge Summary

Patient: Avery Sullivan (fictional), 72-year-old
Admission date: October 31, 2026
Discharge date: November 5, 2026
Attending: Dr. Maria Castillo, Cardiology

Diagnosis: Acute on chronic heart failure with reduced ejection fraction.

Hospital course: You came in with leg swelling, weight gain, and shortness of breath when lying flat. You received IV water pills and lost about 6 pounds of fluid. Your breathing is now comfortable and your discharge weight is 168 pounds.

Medications:
Furosemide 40 mg by mouth once daily in the morning, ongoing. This is a water pill. Take it in the morning so you are not up at night.
Lisinopril 10 mg by mouth once daily, ongoing. Do not use potassium salt substitutes.
Metoprolol succinate 50 mg by mouth once daily, ongoing. Do not crush or chew it. Do not stop it suddenly.

Diet:
Limit sodium to less than 2,000 mg per day. Avoid canned soups, deli meats, and fast food.
Limit fluids to 64 ounces (about 2 liters) per day, including soup, ice, and coffee.

Activity:
Walk 10 to 15 minutes twice a day and rest when tired. Raise your legs when sitting.
No lifting over 10 pounds for 2 weeks.

Daily weights:
Weigh yourself every morning after you urinate, before you eat, in the same clothes, and write it down.

Monitoring:
Call us if you gain more than 3 pounds in 1 day or 5 pounds in 1 week.
Check your blood pressure and pulse every morning for 7 days.

Follow-up:
See Dr. Maria Castillo, Heart Failure Clinic on November 12, 2026 (7 days after discharge) for a post-hospital visit, weight check, and blood tests.
See Primary care on November 19, 2026 (14 days after discharge) for a medication review.
